

Spyware Blaster Tutorial

Double click on the Spyware Blaster icon to start the program.

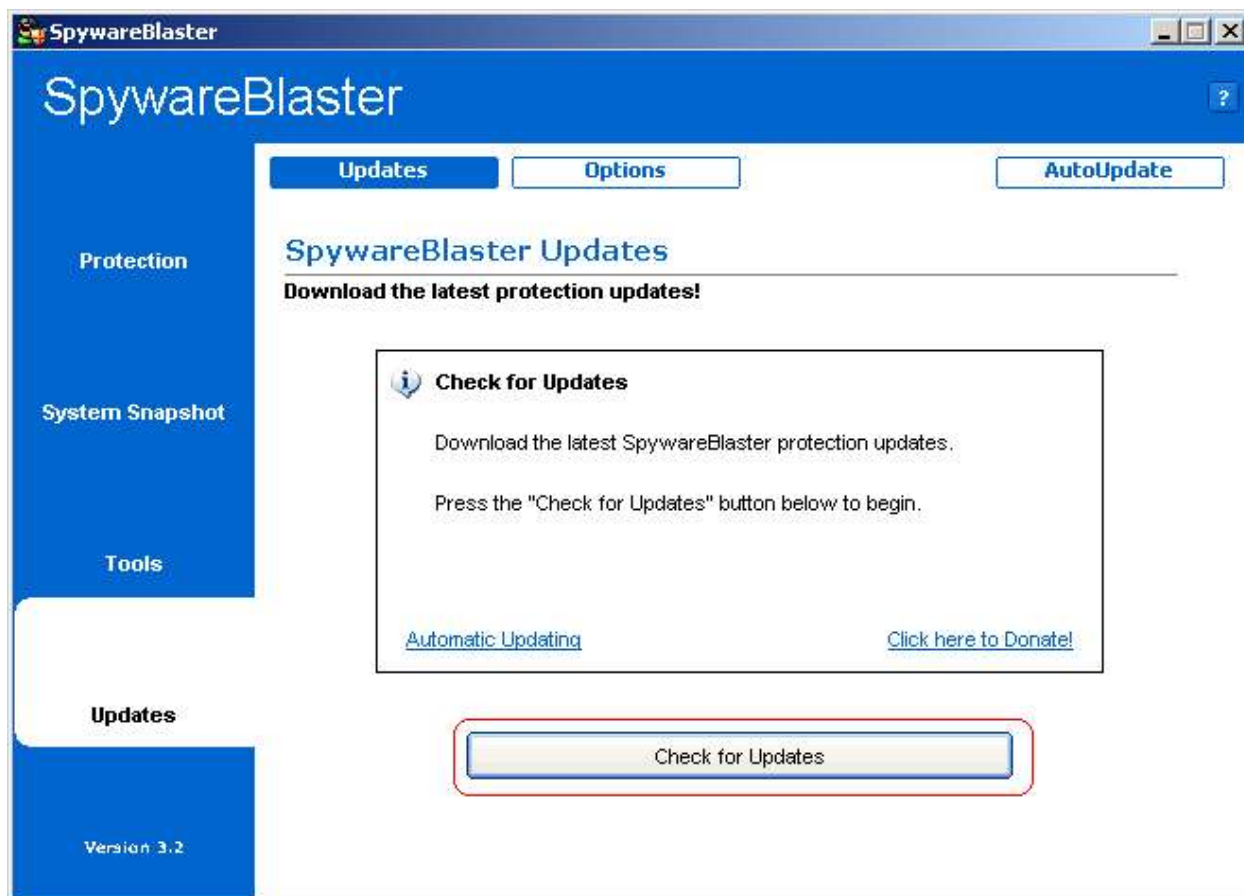

If this is the first time you are using Spyware Blaster, you will see the Spyware Blaster tutorial window appear. Read each screen carefully, clicking “Next” as you go. When on the third and final tutorial screen, click “Finish” to start using the program.

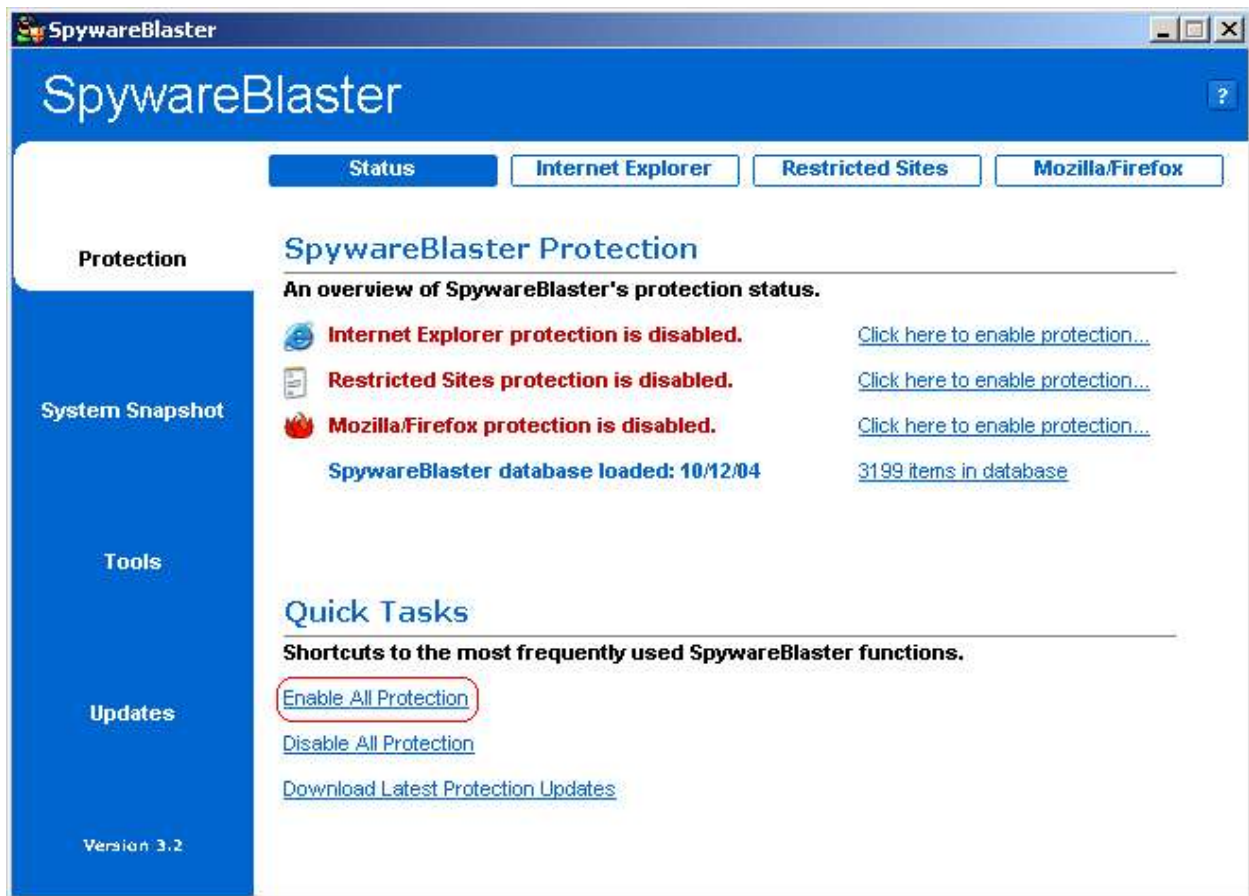

The first thing we need to do is to update the definitions file. To do this, first connect to the internet and then click on the “Updates” tab.

Click the “Check for Updates” button to see if any updates are available.

If there are any updates available, Spyware Blaster will automatically download and install them. Once the update is complete, click on the “Protection” tab. To activate protection against the latest spyware, click on the “Enable all Protection” link under “Quick Tasks”.

Once this is done, you may close the program by clicking the X in the upper right corner.
